

Getting Started

Watch the video to learn about the entire process, from creating a task to submitting it.

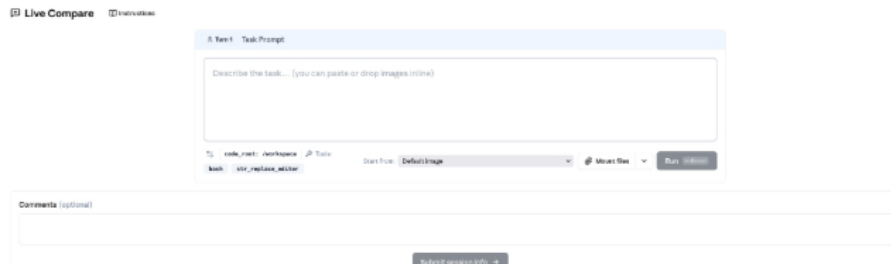

- Video Link: [Submitting a task in Labelbox](#)

Log in and navigate to Taiga

1. Go to the [Taiga platform using this link \(do not edit it\)](#).
2. Log in with your @alignerworkforce credentials (sent to you by email).

Starting your first turn

1. Orient yourself on the Live Compare screen.
 - o A problem consists of the following:
 - i. Prompt
 - ii. Codebase
 - iii. The goal they want to achieve with this combination.
2. Choose a [task category](#). Your choice affects how the turn proceeds, so pick one you're comfortable working in. See **Task categories** for the full list and current priorities.
3. Read the task instructions. Click Instructions, top-left of the Live Compare page. ([Instructions reproduced here](#).)
4. Write your prompt. See the **Prompt Writing Guide** for how to do this well. Your task begins once you submit it.
 - o Maximum 100 minutes per turn on average. Do not exceed this.
 - o A task expires exactly 7 days after it starts. Finish it within 168 hours after starting it.

5. Click Run. Two models, A and B, write their responses. Once they finish, compare the two responses.
6. Wait for the models. This usually takes several minutes though can be up to a couple hours based on the amount of work required for the turn. If the models are taking longer than 5-10 minutes to generate responses, pause your Hubstaff timer and take a break while the model's finish generating.
7. Write your rationale in the textboxes provided including correctly formatted citations. Read the [Writing Rationales](#) page and the [Rationale Writing Guide](#) to familiarize yourself with the rationale writing requirements.
8. Click Submit Preference to move to the next turn, repeating steps 4 through 7, until you hit the context-low error (see [How conversations work](#)). Once you see it, submit the completed task through the **Labelbox p.**  Finding a Codebase

If you hit an error or have a question, **read the [FAQ](#)** before asking in Discord.
