

✓ Submitting Your Task

Use the "TGA-CodeHuman" within your Labelbox dashboard.

Submitting a task in Labelbox

Watch the video to learn about the entire process, from creating a task to submitting it.

- Video Link: [Submitting a task in Labelbox](#)

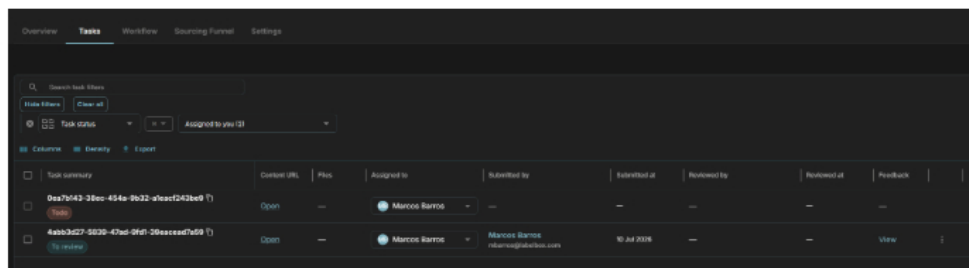

⚠ Important reminder:

There are only three situations in which you should submit a task:

1. When you've reached the token limit and completed your task.
2. When you haven't reached your token limit because the platform is experiencing general instability. Do not submit your entry if it is due to platform overload.
3. When you created the task by mistake and do not intend to complete it.

When you complete the first turn of a task in Taiga, a corresponding task is automatically created in Labelbox and assigned to you. You can see it by clicking "Tasks."

Opening the task gives you access to the task URL and the Labeler questionnaire, the same questionnaire you already fill out after completing tasks.

Fill out the questionnaire once you've hit the context-low error (near or above 1 million tokens) at the end of the conversation:

- **Live Compare Problem ID**
Click on the "Open Content" link in your submission to copy and paste the Live Compare ID. This will be at the top formatted as "Live-Compare-XXXXX"
- **Total hours spent (all working sessions)**
Enter the total hours worked on this single task as a decimal, for example: *6 hours and 30 minutes = 6.5*.
Use Hubstaff to track your time and verify your reported hours are

Secondary programming language

Task description *

accurate.

- **Primary programming language**
Select the main language used.
- **Secondary programming language**
Select a second language if one was used, or "None" if the task only involved one language.
- **Task description**
Write a short free-text description of what the task involved.
- **Token Usage**
Enter the token count reached in the conversation, taken from the value reported in the context error message.
Target is 1,000,000 tokens.  Platform Instructions. If you hit the context-low error.
- **Turns**
Add one entry per turn worked on this task. For each turn, select the task type from the dropdown that best fits it. Include only turns with completed rationale's.
- **Were you blocked on this task because of an error or bug?**
Select "Yes" if you hit a bug or error while tasking; Select "No" if you completed the task without a blocking issue. This doesn't include the final token limit error that is expected.
- **Explain what blocked you (error/bug details)**
Only shown if you answered "Yes" above. Describe the error or bug that blocked you.

Token Usage *

Turn *

+ Add turn

Were you able to complete this task? Select 'No' only if an error or platform failure occurred.

 **Important:** Verify that your total hours are accurate before submitting. If a calculated value is shown and it's incorrect, use the "Total hours" field to enter the correct time.

Once you've filled in all the fields, click **"Submit for Review"** and confirm.

Finding Your Token Count

You must reach 1M tokens to submit unless you encounter a platform error preventing you from continuing the submission. The final token error will give you the token count at the bottom of the error message.

If you are getting an error message preventing you from continuing to 1M tokens, you want to look at the final transcript of the last model's response. You will see "Tokens Remaining:", and want to subtract the remaining tokens from 1 million. For example, the below token count would be $1,000,000 - 373,211 = 626,789$ tokens used. In the Labelbox form, you would enter 626789 for "token usage".

FINAL RESPONSE

 (108)

Tokens Remaining: total 373,211
